

AXCESS Inc. - Personnel Access Control

Securing your facility means more than just controlling access. It's knowing where people are and when they come and go. The AXCESS ActiveTag™ System combines access control with the ability to automatically monitor the movements of people throughout your facility.

Unique Features

Automatic Hands-Free Operation - employees simply walk buttons to push or cards to swipe

Flexible Coverage Zone - operates at very short range for door control, or coverage can be expanded across a broad detection zone for monitoring

Multi-Tag Read - instantaneously reads multiple tags across a broad corridor or within secure areas; no need to herd employees through security gates or choke points

Functional Linkage™ - allows employers to both control and monitor access, by linking assets to employees to detect when unauthorized personnel attempt to leave with valuable property

Covert Monitoring - a wide variety of antenna options offer unobtrusive and aesthetically pleasing installation choices; antennas can be hidden in ceilings, walls and even picture frames

Benefits

Security - The AXCESS ActiveTag System provides a fast, effective means of controlling and tracking personnel movements in and out of secure areas. AXCESS tags uniquely identify each person, allowing the access control system to quickly authorize or deny access or detect the presence of unauthorized personnel in the area.

Convenience - The AXCESS System operates totally hands-free. Employees need only approach the door for their tag to be recognized and reported to the access controller or monitoring station.

Flexibility - Whether you need convenient hands-free access control or advanced personnel and asset monitoring capabilities, AXCESS' ActiveTag technology provides a flexible solution for both.
